Energy Systems Minor

Energy systems are pervasive in our society. A list of energy-related subjects and applications in the engineering curriculum would be nearly endless, but here are some examples:

- Mechanical engineers have a core area in thermo-fluids where courses in thermodynamics, fluid mechanics, and heat transfer form a base for energy systems.
- Electrical engineers address power transmission and distribution as well as electric motors and power systems.
- Civil engineers develop structures for wind turbines and hydroelectric dams.
- Construction engineers need to understand how building systems impact energy utilization.
- Chemical engineers develop alternative fuels and clean burning technologies.
- Material engineers develop new materials for batteries and fuel cells.
- Aerospace engineers develop wind turbines.
- Industrial engineers address manufacturing efficiency and energy reduction.

Energy systems are also a significant focus of the grand challenges of engineering (http://www.engineeringchallenges.org), and this minor will help our students address these issues in their engineering careers.

The goal of the minor in energy systems is to provide ISU engineering students with focused educational opportunities in the broad area of energy systems. Successful energy systems minor students will understand broad energy perspectives, the language of energy systems, and the economic, environmental, and policy issues related to energy in the two required courses (six credits) for the minor (Econ 380 and EE 351 or ME 433). Note that credit for both EE 351 and ME 433 is no longer accepted. The remaining nine credits in the minor can be selected from a list of approved engineering courses related to energy systems to give students the opportunity to extend their knowledge.

The Energy Systems minor is administered by the mechanical engineering department and is open to all undergraduates in the College of Engineering. The minor may be earned by completing 15 credits from the following course list. A complete list of approved elective courses can be found below.

Required Courses

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>

<tbody>
<tr>
<td>ECON 380</td>
<td>Energy, Environmental and Resource Economics</td>
<td>3</td>
</tr>
<tr>
<td>E 351</td>
<td>Analysis of Energy Systems</td>
<td>3</td>
</tr>
<tr>
<td>or M 433</td>
<td>Alternative Energy</td>
<td></td>
</tr>
</tbody>
</table>
E E 553 Steady State Analysis  
E E 554 Power System Dynamics  
E E 555 Advanced Energy Distribution Systems  
E E 556 Power Electronic Systems  
E E 559 Electromechanical Wind Energy Conversion and Grid Integration  
E M 570 Wind Engineering  
ECON 458 Economic Systems for Electric Power Planning  
ENGR 340 Introduction to Wind Energy: System Design & Delivery  
ENSCI 480 Engineering Analysis of Biological Systems  
I E 543 Wind Energy Manufacturing  
M E 332 Engineering Thermodynamics II  
M E 335 Fluid Flow  
M E 413 Fluid Power Engineering  
M E 433 Alternative Energy  
M E 436 Heat Transfer  
M E 437 Introduction to Combustion Engineering  
M E 441 Fundamentals of Heating, Ventilating, and Air Conditioning  
M E 442 Heating and Air Conditioning Design  
M E 444 Elements and Performance of Power Plants  
M E 448 Fluid Dynamics of Turbomachinery  
M E 449 Internal Combustion Engines  
M E 530 Advanced Thermodynamics  
M E 532 Compressible Fluid Flow  
M E 535 Thermochemical Processing of Biomass  
M E 536 Advanced Heat Transfer  
M E 538 Advanced Fluid Flow  
M E 539 Nanoscale Heat Transfer  
M E 542 Advanced Combustion  
M E 545 Thermal Systems Design  
MAT E 311 Thermodynamics in Materials Engineering  
M S E 520 Thermodynamics and Kinetics in Multicomponent Materials  
NUC E 401 Nuclear Radiation Theory and Engineering  
NUC E 421 Nuclear Criticality Safety  
NUC E 441 Probabilistic Risk Assessment  
NUC E 461 Radiation Detection, Measurement and Simulation
