MATERIALS ENGINEERING

For the undergraduate curriculum in materials engineering leading to the degree bachelor of science. The Materials Engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org/. Materials engineering is a broadly-based discipline relating the composition, structure, and processing of materials to their properties, uses and performance. Materials engineering includes a variety of traditional and modern technologies involving metals, ceramics, polymers, composites, and electronic materials.

Because of its interdisciplinary nature, career opportunities for materials engineers bridge all industrial and government sectors including: materials based technologies (materials production), communication/information technologies (semiconducting materials, fiber optics), medical/environmental technologies (biomedical, energy production, waste containment), nanotechnologies, consumer products (building and construction, durable goods), and transportation industries (automotive, aerospace).

The objectives of the materials engineering program are to produce graduates who:

• practice materials engineering in a broad range of industries including materials production, semiconductors, medical/environmental, consumer products, and transportation products
• engage in advanced study in materials and related or complementary fields

Graduates in materials engineering are able to apply scientific and engineering principles to select or design the best materials to solve engineering problems. They are also able to control the microstructure of materials through processing to optimize properties and performance. They are skilled in creative, independent problem solving under time and resource constraints. Graduates have the opportunity to gain experience in materials engineering practice through cooperative work experience or internships in industry, national laboratories, or other funded research. Graduates can develop a global perspective of engineering through various study abroad opportunities supported by the department. Classes provide hands-on skills with a broad range of modern materials processing and characterization equipment and methods.

A degree in materials engineering relies on a strong foundation of math, chemistry and physics. The core materials courses include fundamentals of materials, kinetics and thermodynamics, mechanical properties, computational methods, design, and professional practice experience. Students tailor their programs to their goals and interests through the selection of a specialization from the three available: ceramic materials, metallic materials and polymeric materials. Additional technical electives can be taken in other areas of interest. The breadth and depth of the program provide excellent preparation for both immediate entry into industry or further study in graduate school.

Curriculum in Materials Engineering

Administered by the Department of Materials Science and Engineering. Leading to the degree bachelor of science.

Total credits required: 128 cr. Any transfer credit courses applied to the degree program require a grade of C or better (but will not be calculated into the ISU cumulative GPA, Basic Program GPA or Core GPA). See also Basic Program and Special Programs.

U.S. Diversity: 3 cr.

International Perspectives: 3 cr.

Communication Proficiency/Library requirement:

General Education Electives: 12 cr.

Complete 12 cr. from approved list with a minimum of 3 cr. from 200+ level courses and maximum of 9 cr from the same designator.

Basic Program: 24 cr.

A minimum GPA of 2.00 is required for this set of courses. (Please note that transfer course grades will not be calculated into the Basic Program GPA.) See Requirement for Entry into Professional Program in College of Engineering Overview section.

Students must choose one from the three areas of specialization (12 cr.): ceramic, metallic and polymeric materials.

| Total Credits | **44** |

The courses below meet the specialization requirement. Students select one of the following tracks (ceramics, metals, polymers):

**Ceramic Materials:**
- MAT E 321 Introduction to Ceramic Science
- MAT E 322 Introduction to Ceramic Processing
- MAT E 425 Glass Science and Engineering
- MAT E 433 Advanced Ceramics and Electronic Materials

**Metallic Materials:**
- MAT E 341 Metals Processing
- MAT E 342 Structure/Property Relations in Nonferrous Metals
- MAT E 443 Physical Metallurgy of Ferrous Alloys
- MAT E 444 Corrosion and Failure Analysis

**Polymeric Materials:**
- MAT E 350 Polymers and Polymer Engineering
- MAT E 351 Introduction to Polymeric Materials
- MAT E 453 Physical and Mechanical Properties of Polymers
- MAT E 454 Polymer Composites and Processing

**Other Courses: 24 cr.**

1. These university requirements will add to the minimum credits of the program unless the university-approved courses are also approved by the department to meet other course requirements within the degree program. U.S. diversity and international perspectives courses may not be taken Pass/Not Pass.

3. See Basic Program for Professional Engineering Curricula for accepted substitutions for curriculum designated courses in the Basic Program.

Note: A Mat E student may take up to 9 credit hours from General Education and free electives on a P/NP basis, except for courses used to meet the diversity and international perspectives requirement. S/F courses (different from P/NP) will be considered for these requirements on a course-by-course basis.

Areas of specialization:

- Ceramic Materials: 321, 322, 425, 433
- Metallic Materials: 341, 342, 443, 444
- Polymeric Materials: 350, 351, 453, 454

Well qualified students in materials engineering who are interested in graduate study may apply for concurrent enrollment in the Graduate College. This allows senior-level students to simultaneously pursue both bachelor of science and master of science degrees. See Materials Science and Engineering for more information.

Courses primarily for undergraduates:

MAT E 101: Materials Science & Engineering Learning Community Seminar
Cr. R. F.
Prereq: Enrollment in Materials Science Engineering Learning Community
Introduction to the Materials Science & Engineering Department and resources available to support student success. Offered on a satisfactory-fail basis only.

MAT E 214: Structural Characterization of Materials
(2-2) Cr. 3. F.S.
Prereq: MAT E 215, PHYS 221
Structural characterization of ceramic, electronic, polymeric and metallic materials. Techniques include optical and electron microscopy, x-ray diffraction, and thermal analysis. Identification of materials type, microstructure, and crystal structure.

MAT E 215: Introduction to Materials Science and Engineering I
(3-0) Cr. 3. F.S.
Prereq: Math 165 AND (CHEM 177 or CHEM 167)

MAT E 215L: Introduction to Materials Science and Engineering I - Lab
(0-2) Cr. 1. F.S.
Prereq: Credit or enrollment in MAT E 215 or MAT E 273 or MAT E 392
Materials Engineering majors only. Laboratory exercise in materials.

MAT E 216: Introduction to Materials Science and Engineering II
(3-0) Cr. 3. F.S.
Prereq: MAT E 215, MAT E 273 or MAT E 392; credit or enrollment in PHYS 222
Materials Engineering majors only. Fundamentals of ceramic, polymeric, and composite materials; degradation, electronic, thermal, magnetic, and optical properties of materials. Materials for energy, biomaterials, and nanomaterials.
MAT E 216L: Introduction to Materials Science and Engineering II - Lab
(0-2) Cr. 1. F.S.
Prereq: Credit or enrollment in 216
Materials Engineering majors only. Laboratory exercise in materials.

MAT E 220: Globalization and Sustainability
(Cross-listed with ANTHR, ENV S, GLOBE, M E, SOC). (3-0) Cr. 3. F.S.
An introduction to understanding the key global issues in sustainability.
Focuses on interconnected roles of energy, materials, human resources, economics, and technology in building and maintaining sustainable systems. Applications discussed will include challenges in both the developed and developing world and will examine the role of technology in a resource-constrained world. Cannot be used for technical elective credit in any engineering department.

Meets International Perspectives Requirement.

MAT E 273: Principles of Materials Science and Engineering
(3-0) Cr. 3. F.S.
Prereq: CHEM 167 or CHEM 177; MATH 165

MAT E 301: Materials Engineering Professional Planning
Cr. R. S.
Prereq: Sophomore classification in materials engineering
Preparation for a career in industry or advanced study in graduate school; Lectures and guest speakers discuss various topics, including: experiential learning, resumes, interviewing, leadership, networking, professional ethics, and graduate school opportunities. Offered on a satisfactory-fail basis only.

MAT E 314: Kinetics and Phase Equilibria in Materials
(3-0) Cr. 3. S.
Prereq: MAT E 216, MAT E 311
Kinetic phenomena and phase equilibria relevant to the origins and stability of microstructure in metallic, ceramic and polymeric systems. Application of thermodynamics to the understanding of stable and metastable phase equilibria, interfaces and their effects on stability: defects and diffusion, empirical rate equations for transformation kinetics, driving forces and kinetics of nucleation, diffusional and diffusionless phase transformations.

MAT E 317: Introduction to Electronic Properties of Ceramic, Metallic, and Polymeric Materials
(3-0) Cr. 3. F.
Prereq: MAT E 216 and PHYS 222

MAT E 319: Mechanics of Structures and Materials
Cr. 3. S.
Prereq: PHYS 221, credit or enrollment in MATH 166
Fundamentals of engineering mechanics as applied to materials. Forces and moments; stresses in loaded bodies; elasticity and stress analysis including stress / strain relationships; failure of materials including the mechanics of creep, fracture, and fatigue. Only one of MAT E 319 or E M 324 may be used for graduation requirements.

MAT E 321: Introduction to Ceramic Science
(3-0) Cr. 3. F.
Prereq: MAT E 216
Ceramic crystal structures, defects, diffusion and transport. Phase equilibria and microstructures. Thermal, electronic, optical and magnetic properties of ceramics.

MAT E 322: Introduction to Ceramic Processing
(2-3) Cr. 3. S.
Prereq: MAT E 214, MAT E 321
MAT E 332: Semiconductor Materials and Devices
(Cross-listed with E E). (3-0) Cr. 3. S.
Prereq: PHYS 222; MAT E majors: MAT E 317; CPE and E E majors: E E 230
Introduction to semiconductor material and device physics. Quantum mechanics and band theory of semiconductors. Charge carrier distributions, generation/recombination, transport properties. Physical and electrical properties and fabrication of semiconductor devices such as MOSFETs, bipolar transistors, laser diodes and LED's.

MAT E 334: Electronic & Magnetic Properties of Metallic Materials
(3-0) Cr. 3. Alt. S., offered odd-numbered years.
Prereq: MAT E 317

MAT E 341: Metals Processing
(2-2) Cr. 3. F.
Prereq: Mat E 214 and either MAT E 215, 273 or 392
Theory and practice of metal processing, including casting; powder metallurgy; additive manufacturing; rolling; forging; extrusion; drawing; material removal; joining; surface modification; and heat treatment. Use of processing software.

MAT E 342: Structure/Property Relations in Nonferrous Metals
(3-0) Cr. 3. S.
Prereq: MAT E 215 or 273 or 392
Processing of metals and alloys to obtain desired mechanical properties by manipulation of their microstructure and composition of constituent phase(s). Relevance of defects to mechanical properties, plastic flow. Strengthening mechanisms in metals and alloys. Microstructure, heat treatment and mechanical properties of engineering alloys. Metal-matrix composites.

MAT E 348: Solidification Processes
(Cross-listed with I E). (2-2) Cr. 3. S.
Prereq: IE 248 and MAT E 273, or MAT E 215
Theory and applications related to metal casting, welding, polymer processing, powder metallurgy, and composites manufacturing, and related rapid manufacturing processes.

MAT E 350: Polymers and Polymer Engineering.
(3-0) Cr. 3. S.
Prereq: MAT E 216
Fundamental concepts of soft matter, including polymer, colloid and surfactant. Their physical and chemical properties, rheology and production methods. Applications of polymers in the chemical industry. Related topics in surface, diffusion and stability.

MAT E 351: Introduction to Polymeric Materials
(3-0) Cr. 3. F.
Prereq: MAT E 216
Introduction to polymeric materials, synthesis, structure and properties. Relationship between polymer composition, processing and properties.

MAT E 362: Principles of Nondestructive Testing
(Cross-listed with E M). (3-0) Cr. 3. S.
Prereq: PHYS 112 or PHYS 222
Radiography, ultrasonic testing, magnetic particle inspection, eddy current testing, dye penetrant inspection, and other techniques. Physical bases of tests, materials to which applicable, types of defects detectable, calibration standards, and reliability safety precautions.

MAT E 362L: Nondestructive Testing Laboratory
(Cross-listed with E M). (0-3) Cr. 1. S.
Prereq: Credit or enrollment in MAT E 362
Application of nondestructive testing techniques to the detection and sizing of flaws in materials and to the characterization of material's microstructure. Included are experiments in hardness, dye penetrant, magnetic particle, x-ray, ultrasonic and eddy current testing. Field trips to industrial laboratories.

MAT E 391: Introduction to US Women’s roles in Industry and Preparation for Summer Study
(3-0) Cr. 3. S.
Introduction to the historical role of women as related to US industry, family and community with emphasis on the years 1830 - 1945, but also related to the current climate. Topics completed in 392 with arranged lectures at Brunel University. Orientation for Brunel summer study program. Offered on a satisfactory-fail basis only. Credit for graduation allowable only upon completion of Mat E 392. Meets U.S. Diversity Requirement
MAT E 392: Principles of Materials Science and Engineering  
(3-0) Cr. 3. SS.  
Prereq: MAT E 391, Math 165, CHEM 167 or CHEM 177  
Introduction to the structure and properties of engineering materials.  
Structure of crystalline solids and imperfections. Atomic diffusion.  
Mechanical properties and failure of ductile and brittle materials.  
Dislocations and strengthening mechanisms. Phase equilibria, phase  
transformations, microstructure development, and heat treatment  
principles of common metallurgical systems including steels and  
aluminum alloys. Structure and mechanical properties of ceramic,  
polymeric and composite materials. Thermal properties of materials.  
Corrosion and degradation. Basic electronic properties of materials.  
Engineering applications. Only one of MAT E 215, 273, or 392 may  
count toward graduation.  
Meets International Perspectives Requirement.

MAT E 396: Summer Internship  
Cr. R. Repeatable. SS.  
Prereq: Permission of department and Engineering Career Services  
Professional work period of at least 10 weeks during the summer.  
Students must register for this course prior to commencing work. Offered  
on a satisfactory-fail basis only.

MAT E 398: Cooperative Education (Co-op)  
Cr. R. Repeatable. F.S.  
Prereq: Permission of department and Engineering Career Services  
Professional work period. One semester per academic or calendar year.  
Students must register for this course before commencing work. Offered  
on a satisfactory-fail basis only.

MAT E 413: Materials Design and Professional Practice I  
(2-2) Cr. 3. F.S.  
Prereq: Senior Classification: Mat E 413-414 sequence is intended for  
students in their final two semesters before graduation.  
Fundamentals of materials engineering design, information sources,  
team behavior, professional preparation, quantitative design including  
finite-element analysis and computer aided design, materials selection,  
informatics and combinatorial methods. Analysis of design problems,  
development of solutions, selected case studies. Oral presentation skills.  
Preparations for continued project in Mat E 414.

MAT E 414: Materials Design and Professional Practice II  
(2-2) Cr. 3. F.S.  
Prereq: MAT E 413  
Integration of materials processing, structure/composition, properties  
and performance principles in materials engineering problems. Multi-  
scale design of materials, materials processing, case studies including  
cost analysis, ethics, risk and safety. Team projects specified by either  
industry or academic partners. Written and oral final project reports.

MAT E 418: Mechanical Behavior of Materials  
(3-0) Cr. 3. F.  
Prereq: MAT E 216, MAT E 319  
Mechanical behavior of ceramics, metals, polymers, and composites.  
Relationships between materials processing and atomic aspects of  
estricity, plasticity, fracture, and fatigue. Life prediction, stress-and  
failure analysis.

MAT E 419: Magnetism and Magnetic Materials  
(Dual-listed with M S E 519). (Cross-listed with E E). (3-0) Cr. 3. F.  
Prereq: E E 311 or MAT E 317 or PHYS 364  
Magnetic fields, flux density and magnetization. Magnetic materials,  
magnetic measurements. Magnetic properties of materials. Domains,  
domain walls, domain processes, magnetization curves and hysteresis.  
Types of magnetic order, magnetic phases and critical phenomena.  
Magnetic moments of electrons, theory of electron magnetism.  
technological application, soft magnetic materials for electromagnets,  
hard magnetic materials, permanent magnets, magnetic recording  
technology, magnetic measurements of properties for materials  
evaluation.

MAT E 425: Glass Science and Engineering  
(2-3) Cr. 3. F.  
Prereq: MAT E 214, MAT E 321  
Composition, structure, properties manufacturing, and applications  
of inorganic glasses. Mechanical, structural, thermal, optical,  
ionic, electronic, and biological applications of inorganic glasses,  
especially silicate glasses. Contemporary topics in glass science and  
engineering such as glass optical fiber communication and flat panel  
display technologies. Laboratory exercises in the preparation and  
characterization of silicate glasses.

MAT E 432: Microelectronics Fabrication Techniques  
(Dual-listed with M S E 532). (Cross-listed with E E). (2-4) Cr. 4.  
Prereq: PHYS 222; Mat E majors: MAT E 317; CprE and EE majors: E E 230  
Techniques used in modern integrated circuit fabrication, including  
diffusion, oxidation, ion implantation, lithography, evaporation, sputtering,  
chemical-vapor deposition, and etching. Process integration. Process  
evaluation and final device testing. Extensive laboratory exercises  
utilizing fabrication methods to build electronic devices. Use of computer  
simulation tools for predicting processing outcomes. Recent advances in  
processing CMOS ICs and micro-electro-mechanical systems (MEMS).
MAT E 433: Advanced Ceramics and Electronic Materials
(3-0) Cr. 3. S.
Prereq: MAT E 317, MAT E 321

MAT E 437: Electronic Properties of Materials
(Dual-listed with M S E 537). (Cross-listed with E E). Cr. 3. S.
Prereq: E E 332 or MAT E 317 or PHYS 322
Review of classical and quantum mechanical descriptions of electrons in solids, band theory, metallic conduction, lattice vibrations, semiconductors, semiconductor devices, dielectrics, polarization, dielectric relaxation, crystal anisotropy, ferroelectricity, piezoelectricity, superconductivity, magnetism, device applications.

MAT E 443: Physical Metallurgy of Ferrous Alloys
(3-0) Cr. 3. F.
Prereq: credit or enrollment in 314

MAT E 444: Corrosion and Failure Analysis
(2-2) Cr. 3. S.
Prereq: MAT E 214, 215 or 273 or 392
Corrosion and corrosion control of metallic systems. Corrosion fundamentals, classification of different types of metallic corrosion, corrosion properties of various engineering alloys, corrosion control. Failure analysis. Characteristics of common types of metallic failures, case studies of failures, designing to reduce failure risk.

MAT E 452: Scanning and Auger Electron Microscopy
(Dual-listed with M S E 552). (2-3) Cr. 3. F.
Prereq: PHYS 222

MAT E 453: Physical and Mechanical Properties of Polymers
(2-3) Cr. 3. F.
Prereq: MAT E 214, MAT E 351
Overview of polymer chemical composition, microstructure, thermal and mechanical properties, rheology, and principles of polymer materials selection. Intensive laboratory experiments include chemical composition studies, microstructural characterization, thermal analysis, and mechanical testing.

MAT E 454: Polymer Composites and Processing
(Dual-listed with M S E 554). (3-0) Cr. 3. S.
Prereq: MAT E 351
Basic concepts in polymer composites, blends, and block copolymers. Phase separation and miscibility, microstructures and mechanical behavior. Fiber reinforced and laminated composites. Viscosity, rheology, viscoelasticity of polymers. Polymer melt processing methods such as injection molding and extrusion; selection of suitable processing methods and their applications.

MAT E 456: Biomaterials
(Dual-listed with M S E 556). (Cross-listed with B M E). (3-0) Cr. 3. F.
Prereq: CHEM 178 and MAT E 216 or MAT E 273 or MAT E 392
Presentation of the basic chemical and physical properties of biomaterials, including metals, ceramics, and polymers, as they are related to their manipulation by the engineer for incorporation into living systems. Role of microstructure properties in the choice of biomaterials and design of artificial organs, implants, and prostheses.

MAT E 457: Chemical and Physical Metallurgy of Rare Earth Metals
(Dual-listed with M S E 557). (3-0) Cr. 3. Alt. S., offered even-numbered years.
Prereq: MAT E 311 or CHEM 325
Electronic configuration, valence states, minerals, ores, beneficiation, extraction, separation, metal preparation and purification. Crystal structures, phase transformations and polymorphism, and thermochemical properties of rare earth metals. Chemical properties: inorganic and organometallic compounds, alloy chemistry, nature of the chemical bonding. Physical properties: mechanical and elastic properties, magnetic properties, resistivity, and superconductivity.
MAT E 466: Multidisciplinary Engineering Design
(Cross-listed with A B E, A E R E, B M E, CPR E, E E, ENGR, I E, M E). (1-4) Cr.
3. Repeatable. F.S.
Prereq: Student must be within two semesters of graduation; permission of
instructor.
Application of team design concepts to projects of a multidisciplinary
nature. Concurrent treatment of design, manufacturing, and life cycle
considerations. Application of design tools such as CAD, CAM, and
FEM. Design methodologies, project scheduling, cost estimating,
quality control, manufacturing processes. Development of a prototype
and appropriate documentation in the form of written reports, oral
presentations and computer models and engineering drawings.

MAT E 467: Multidisciplinary Engineering Design II
(Cross-listed with AER E, ENGR, I E, M E). (1-4) Cr. 3. Repeatable,
Prereq: Student must be within two semesters of graduation or receive
permission of instructor.
Build and test of a conceptual design. Detail design, manufacturability,
test criteria and procedures. Application of design tools such as CAD
and CAM and manufacturing techniques such as rapid prototyping.
Development and testing of a full-scale prototype with appropriate
documentation in the form of design journals, written reports, oral
presentations and computer models and engineering drawings.

MAT E 481: Computational Modeling of Materials
(Dual-listed with M S E 581). (3-0) Cr. 3. Alt. F., offered odd-numbered
years.
Prereq: MATH 265 and MAT E 311 or CH E 381 or CHEM 325 or PHYS 304
Introduction to the basic methods used in the computational modeling
and simulation of materials, from atomistic simulations to methods at
the mesoscale. Students will be expected to develop and run sample
programs. Topics to be covered include, for example, electronic structure
calculations, molecular dynamics, Monte Carlo, phase-field methods, etc.

MAT E 488: Eddy Current Nondestructive Evaluation
(Dual-listed with M S E 588). (Cross-listed with E E). (3-0) Cr. 3. Alt. F.,
offered odd-numbered years.
Prereq: MATH 265 and (MAT E 216 or MAT E 273 or MAT E 392 or E E 311 or
PHYS 364)
Electromagnetic fields of various eddy current probes. Probe field
interaction with conductors, cracks and other material defects.
Ferromagnetic materials. Layered conductors. Elementary inversion
of probe signals to characterize defects. Special techniques including
remote-field, transient, potential drop nondestructive evaluation and the
use of Hall sensors. Practical assignments using a 'virtual' eddy current
instrument will demonstrate key concepts.

MAT E 490: Independent Study
Cr. arr. Repeatable.
Investigation of individual research or special topics.

MAT E 490C: Independent Study: Approved Student Submitted Proposal
Cr. arr. Repeatable. F.S.S.
Prereq: permission of department
Independent study that is being proposed to be used toward graduation
or minor requirements as a technical elective. This requires a proposal to
the department’s Curriculum Committee before the semester starts.

MAT E 490H: Independent Study: Senior Honors Project
Cr. arr. F.S.S.
Prereq: permission of department
Independent study that is being proposed to be used for a Senior Honors
Project (2 credits) and possibly for extra credits toward graduation
or minor requirements. This requires a proposal to the department’s
Curriculum Committee before the semester starts.

MAT E 490R: Independent Study: Research
Cr. arr. Repeatable. F.S.S.
Prereq: permission of department
Independent study that is being proposed to gain research experience.
This requires a proposal to the department’s Curriculum Committee
before the semester starts. Credits can only be used by Mat E majors
toward graduation as a free elective.
